

Smart Farmer-IOT Enabled Smart Farming Application

Assignment -4

TEAM ID : PNT2022TMID17579

Question-1:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud

CODE :

```
#include <WiFi.h>
#include <PubSubClient.h> void callback(char* subscribetopic, byte* payload,
unsigned int payloadLength);
#define ORG "92zbfc"
#define DEVICE_TYPE "esp32"
#define DEVICE_ID "12345"
#define TOKEN "12345678" String data3; char server[] = ORG
".messaging.internetofthings.ibmcloud.com"; char publishTopic[]
= "iot-2/evt/Data/fmt/json"; char subscribetopic[]
= "iot-2/cmd/test/fmt/String"; char authMethod[] = "use-token-
```

```

auth"; char token[] = TOKEN; char clientId[] = "d:" ORG ":"
DEVICE_TYPE ":" DEVICE_ID;
WiFiClient wifiClient;
PubSubClient client(server, 1883, callback ,wifiClient);
const int trigPin = 5; const int echoPin = 18; #define
SOUND_SPEED 0.034 long duration; float distance;
void setup() { Serial.begin(115200); pinMode(trigPin,
OUTPUT); pinMode(echoPin, INPUT); wificonnect();
mqttconnect();
}
void loop()
{ digitalWrite(trigPin, LOW);
delayMicroseconds(2);
digitalWrite(trigPin, HIGH);
delayMicroseconds(10);
digitalWrite(trigPin, LOW); duration
= pulseIn(echoPin, HIGH); distance
= duration * SOUND_SPEED/2;
Serial.print("Distance (cm): ");
Serial.println(distance); if(distance<100)
{
Serial.println("ALERT!!");
delay(1000);
PublishData(distance);
delay(1000); if
(!client.loop())
{ mqttconnect();
} }
delay(1000)
; }
void PublishData(float dist) { mqttconnect();
String payload = "{\"Distance\": "; payload += dist; payload
+= ", \"ALERT!!\": \"\" \"Distance less than 100cms\"";
payload += "}";
Serial.print("Sending payload: ");
Serial.println(payload);

if (client.publish(publishTopic, (char*) payload.c_str())) {
Serial.println("Publish ok");
} else {
Serial.println("Publish failed");
} }
void mqttconnect() { if
(!client.connected())
{ Serial.print("Reconnecting client to ");
Serial.println(server);
while (!client.connect(clientId, authMethod, token)) {
Serial.print("."); delay(500);
}
initManagedDevice();
Serial.println();
} }

```

```

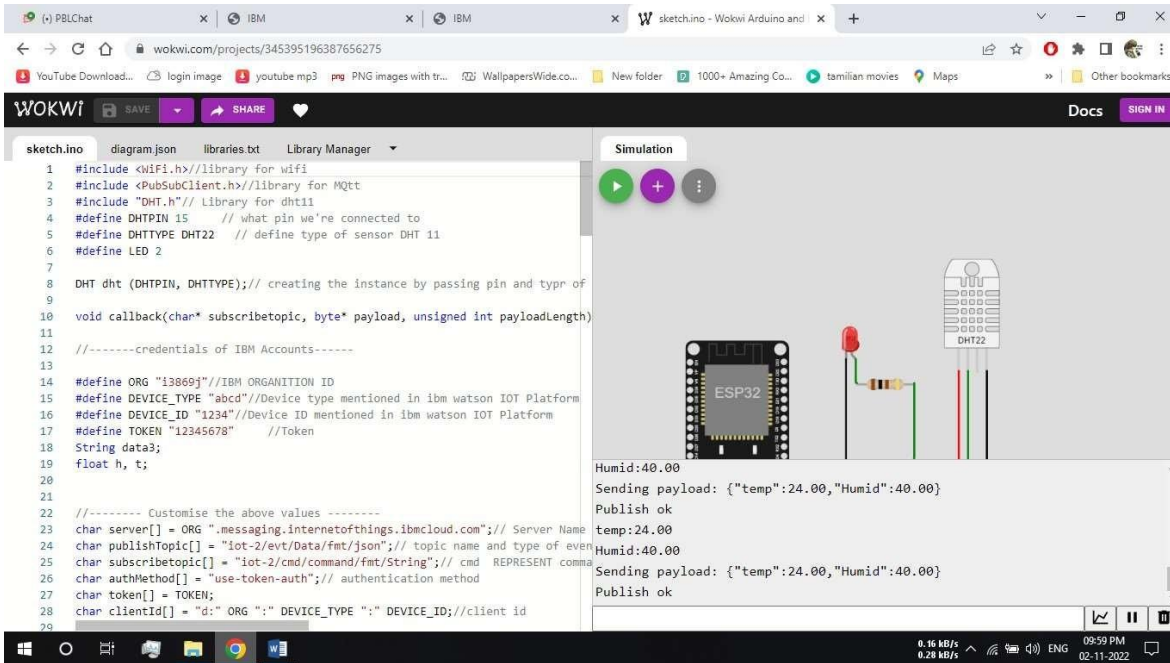

void wificonnect()
{
  Serial.println();
  Serial.print("Connecting to "); WiFi.begin("Wokwi-GUEST", "", 6); while (WiFi.status() !=
  WL_CONNECTED) { delay(500); Serial.print(".");
  }
  Serial.println("");
  Serial.println("WiFi connected");
  Serial.println("IP address: ");
  Serial.println(WiFi.localIP());
}
void initManagedDevice() {
  if (client.subscribe(subscribetopic)) { Serial.println((subscribetopic));
  Serial.println("subscribe to cmd OK");
  } else {
  Serial.println("subscribe to cmd FAILED");
  } }
void callback(char* subscribetopic, byte* payload, unsigned int payloadLength)
{
  Serial.print("callback invoked for topic: ");
  Serial.println(subscribetopic); for (int i = 0; i
  < payloadLength; i++)
  {
  data3 += (char)payload[i];
  }
  Serial.println("data: "+ data3); data3="";
}

```

Wokwi Link :

Output and Simulation :

The screenshot displays the Wokwi web interface for a project titled "Wokwi Arduino and". The interface is divided into two main sections: a code editor on the left and a simulation window on the right.

Code Editor (sketch.ino):

```
1 #include <WiFi.h> //library for wifi
2 #include <PubSubClient.h> //library for MQTT
3 #include "DHT.h" // Library for dht11
4 #define DHTPIN 15 // what pin we're connected to
5 #define DHTTYPE DHT22 // define type of sensor DHT 11
6 #define LED 2
7
8 DHT dht (DHTPIN, DHTTYPE); // creating the instance by passing pin and type of
9
10 void callback(char* subscribetopic, byte* payload, unsigned int payloadLength)
11
12 //-----credentials of IBM Accounts-----
13
14 #define ORG "138693" //IBM ORGANITION ID
15 #define DEVICE_TYPE "abcd" //Device type mentioned in ibm watson IOT Platform
16 #define DEVICE_ID "1234" //Device ID mentioned in ibm watson IOT Platform
17 #define TOKEN "12345678" //Token
18 String data3;
19 float h, t;
20
21 //----- Customise the above Values -----
22
23 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
24 char publishTopic[] = "iot-2/evt/Data/fmt/json"; // topic name and type of event
25 char subscribetopic[] = "iot-2/cmd/command/fmt/String"; // cmd REPRESENT comma
26 char authMethod[] = "use-token-auth"; // authentication method
27 char token[] = TOKEN;
28 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
29
```

Simulation Window:

The simulation window shows a visual representation of the hardware. An ESP32 microcontroller is connected to a DHT22 sensor via a breadboard. The sensor is connected to the microcontroller's pins. The simulation output shows the following sequence of events:

- Humid:40.00
- Sending payload: {"temp":24.00,"Humid":40.00}
- Publish ok
- temp:24.00
- Humid:40.00
- Sending payload: {"temp":24.00,"Humid":40.00}
- Publish ok

The bottom status bar indicates the upload speed (0.16 MB/s) and the download speed (0.28 MB/s). The system clock shows 09:59 PM on 02-11-2022.

Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events.
